
LEVEL 4 MSSP CORP

MANAGED IT + CYBERSECURITY + RESILIENCE

LEVEL 4 AT A GLANCE

# One accountable partner for IT and cybersecurity.

Level 4 helps organizations replace fragmented support, security tools, compliance work, and recovery planning with a connected operating model led by experienced engineers.

## Three practical ways to engage

Choose the operating model that fits the organization - without forcing a one-size-fits-all plan.

MSSP ONE

### Fully managed

Day-to-day IT, cybersecurity, monitoring, support, compliance alignment, cloud, and recovery under one accountable service model.

MSSP CONVERGE

### Co-managed

Security operations, senior escalation, compliance support, and specialized capacity that strengthens an existing internal IT team.

SECURITY SERVICES

### Focused protection

Managed security services including SOC and SIEM, MDR/XDR/EDR, identity, vulnerability management, incident coordination, and resilience.

### Why clients and partners choose Level 4

- More than 30 years of technology and security experience
- Security built into IT operations - not bolted on afterward
- Senior engineering access and clear escalation ownership
- Remote-first efficiency with honest, coordinated onsite support

### Ready for a stronger IT and security operating model?

# A stronger operating model for IT and security

Practical guidance first. Clear ownership and fit before a proposal.

## A strong fit when...

- IT problems keep returning or response is too slow
- Security tools exist, but ownership and response are unclear
- An internal IT team needs deeper security or senior engineering capacity
- Compliance, cyber insurance, or customer requirements are increasing
- Backup exists, but recovery has not been proven
- Growth, multiple locations, cloud, or AI initiatives are outpacing the current model

## What Level 4 can cover

- Managed IT, helpdesk, monitoring, patching, and cloud operations
- 24/7 managed security operations, SIEM, MDR, XDR, and EDR
- Identity, email, endpoint, network, and vulnerability security
- Compliance support, evidence, risk remediation, and incident coordination
- Immutable backup, disaster recovery, private cloud, and business continuity
- Secure AI and artificial intelligence consulting, governance, and implementation

## A practical path forward

### 1 Discover

Start with business needs, recurring problems, ownership, timing, risk, and current constraints.

### 2 Assess

Clarify the operating gaps across IT, security, compliance, cloud, and recovery.

### 3 Build

If there is a fit, receive a clear recommendation and an appropriate service model.

## Start a practical conversation

Review the complete service model online, then book a meeting to discuss your IT, security, compliance, recovery, cloud, or AI priorities with Level 4.
